# Facial expression

A facial expression is one or more motions or positions of the muscles beneath the skin of the **face**. According to one set of controversial theories, these movements convey the emotional state of **an** individual to observers. Facial expressions are a form of nonverbal communication. They are a primary means of conveying social information between humans, but they also occur in most other mammals and some other **animal** species.

The eyes are often viewed as important features of facial expressions. Aspects **such** as blinking rate can possibly **be** used to indicate whether a **person** is nervous or whether they are lying. Also, **eye** contact is considered **an** important aspect of interpersonal communication. However, there are cultural differences regarding the social propriety of maintaining **eye** contact or not.

Beyond the accessory nature of facial expressions in spoken communication between people, they play a significant role in communication with sign **language**. Many phrases in sign **language** include facial expressions in the display.
