REGIONS OF THORAX .....	3
CHEST .....	3

## REGIONS OF THORAX

Regiones thoracicae anterolaterales	Anterior and lateral thoracic regions
Regio presternalis	Presternal region
Fossa infraclavicularis <a href="#">Mohrenheimi</a>	Infraclavicular fossa <a href="#">Mohrenheimi</a>
Trigonum clavipectorale; trigonum deltopectorale	Clavipectoral triangle; deltopectoral triangle
Regio pectoralis	Pectoral region
Regio pectoralis lateralis	Lateral pectoral region
Regio mammaria	Mammary region
Regio inframammaria	Inframammary region
Regio axillaris	Axillary region
Fossa axillaris	Axillary fossa

- **PECTUS (CHEST)**
  - chest walls
    - Ribs
      - Muscles
      - nerve supply
      - arterial supply
      - venous drainage
    - **Regio pectoralis (Pectoral region)**
      - Clavipectoral fascia
      - Muscles
    - regio presternalis
    - regio mammaria
    - regio inframammaria
    - **BACK CHEST**
    - **SIDE CHEST**
  - THORACIC CAVITY
    - thoracic inlet
    - base of thorax
      - Diaphragm
    - **PLEURA**
      - **LUNG**
    - **MEDIASTINUM**
      - **PERICARDIUM**
        - **HEART**
          - **HEART**

## CHEST

- **Clavicle** lies horizontally at the root of neck separating it from the front of chest. the bone is subcutaneous, and therefore palpable throughout its length. medially it articulates with sternum at the sternoclavicular joint and laterally with the acromioclavicular joint. both the joints are palpable because of the upward projecting ends of the **clavicle**.
- Jugular notch (interclavicular or suprasternal notch)
- Sternal angle (angle of Louis) is felt as a transverse ridge about 5cm below the jugular notch.
- Epigastric fossa (pit of **stomach**) is the **depression** in infrasternal angle. The fossa overlies the xiphoid process, and is bounded on each side by the seventh costal cartilage.

- Nipple is markedly variable in position in females. In males and in immature females , it usually lies in the fourth intercostal space just medial to the midclavicular line.
- Midclavicular line
- Infraclavicular fossa (deltopectoral triangle)
- Tip of coracoid process
- Acromion
- Axilla
- Midaxillary line
