SANSKRITOGRAPHY

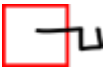

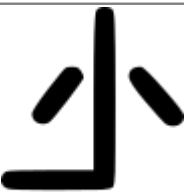

Sanskritography is the study of the glyphs and their etymological origin along with their meaning. It deals with the true origin of the alphabets and compares it with other words and alphabets.

MANTRAKSHAR PARTICLES

Mantrakshar particles are the fundamental radicals used while writing the characters it can be written in a reduced form or in its original form.

We can use the **analogy** of writing the vowels in hindi , so we have main vowels A(अ) ,i (इ) , u(उ) and when writing them we don't actually use the original vowels but simply use their indicators or so called reduced forms , Just as in case of K (क) + i (इ) = कि (ki) and similarly in **mantrakshar** when we use **eye** + **water** = tears /cry

character 1	character 2	combined character
K(क)	i (इ)	ki (कि)
 Eye	 Water	 Cry
 Cup	 Fire	 Cook
 Object	 Light	 New
RADICAL	REDUCED FORM	MANTRAKSHAR
WATER		 Water
FIRE		 Fire

RADICAL	REDUCED FORM	MANTRAKSHAR
AIR	 Air flow	 Air
LIGHT	 Light	 Light
SOUND	 Sound	 Sound
PAIN	 Pain	 Ache
LEGS	 Legs	 Leg
ARM	 Arm	 Arm
LESS	 Less	 Less
MORE	 More	 More
LID	 Lid	 Cover

RADICAL	REDUCED FORM	MANTRAKSHAR
NORMAL	— □ —	 Normally

STROKES

Mantrakshar strokes are the calligraphic strokes needed to write the **Mantrakshar** characters in regular **script** used in calligraphy. These strokes are the classified set of line patterns that may be arranged and combined to form character.

The study and classification of Mantrakshar strokes is used for:

- understanding **mantrakshar** character calligraphy - the correct method of writing, shape formation and stroke order required for character legibility;
- understanding stroke changes according to the style that is in use;
- defining stroke naming and counting conventions;
- identifying fundamental components of **Mantrakshar** radicals; and
- their use in computing.

SINGLE STROKES

These are the most basic strokes used for creating almost any character in **mantrakshar**. These strokes are also used to **create** the **mantrakshar** particles. These basic strokes are written in a very small quantity just to signify the presence so they are usually considered to be equivalent to dots because you cannot differentiate these strokes with each other. Their writing order is given below in the picture as horizontal stroke is written from left to right, vertical stroke is written from top to bottom, left slash is written as a throw away towards left side, right slash is written somewhat slowly and stress is given so it is a press down stroke toward the right lower **corner**.

stroke	direction	Mantra
□	left to right	horizontal
□	up to down	vertical
/	centre to lower left corner	throw away
\	centre to lower right corner	press down

SINGLE STROKE

Arrows indicate the direction in which the stroke is written

DOUBLE STROKES

These are the compound pair of strokes which can be written without lifting the pen. These strokes are also used frequently in constructing the mantrakshar characters.

DOUBLE STROKES

sitting posture 1	sitting posture 2	

TRIPLE STROKES

A compound stroke (also called a complex stroke) is produced when two or more basic strokes are combined in a single stroke written without lifting the writing instrument from the writing surface. Below is the list of the complex triple stroke formed by the combination of basic 3 strokes. These strokes are used in forming a huge number of [mantrakshar](#) characters as well as forming the devanagri alphabets.

TRIPLE STROKES

CURSIVE AND STRAIGHT

Another form of writing is cursive which is formed by combining the cursive forms. The sanskrit or devanagri alphabets use straight strokes as well as cursive strokes which are written in a combined form, they combine the cursive forms with the simple basic strokes like vertical [bar](#) , horizontal [bar](#) and then the full [alphabet](#) is formed. below is a simple [table](#) showing the alphabets of sanskrit formed by combining the cursive with the straight forms.

3 STROKES	reverse S						
3 STROKES	S form						

FOUR STROKES

This category contains 4 strokes which can [be](#) written without lifting the pen or some strokes have to [be](#) written by lifting the pen.

E form of strokes have to [be](#) written by lifting the pen once.

FOUR STROKES

FOUR STROKES	E forms	ह	घ	छ	ध	च			
FOUR STROKES	reverse E		उअ	ऊ					
FOUR STROKES									
4 strokes enclosed									

FOUR STROKES

These strokes contain five basic strokes and they can be used to write other characters. they can also be used to construct Sanskrit alphabets.

FIVE STROKES
